

Know Your Product: The Intersection Between Regulatory Requirements and Ingredient Transparency

**Steve Bennett, EVP Scientific & Regulatory Affairs
Household & Commercial Products Association**

Presenter biography

Steve leads the scientific and regulatory department, developing science policies, and providing scientific and regulatory expertise on issues pertaining to HCPA's seven product divisions. He is currently leading the association's TSCA implementation efforts and works on a myriad of technical aspects pertaining to green chemistry, ingredient disclosure, air quality, sustainability, pesticides, California's Proposition 65, and poison prevention.

Presentation abstract

When the California Cleaning Products Right to Know Act was passed in 2017, it became the first state to require disclosure of ingredients for cleaning products. Driven by transparency efforts to inform consumers, industry voluntary efforts were rapidly converted into a de facto national standard for the disclosure of ingredients for a wide-class of products. Learn about the implementation challenges and lessons learned from the process up and down the supply chain, the learnings other industries can take from these experiences.
